

Name: _____

Student ID: _____

Ocean Acidification Lab

Equations:

Ocean Acidification:

Calcium Carbonate: _____

Vinegar: _____

Research Questions:

1.

2.

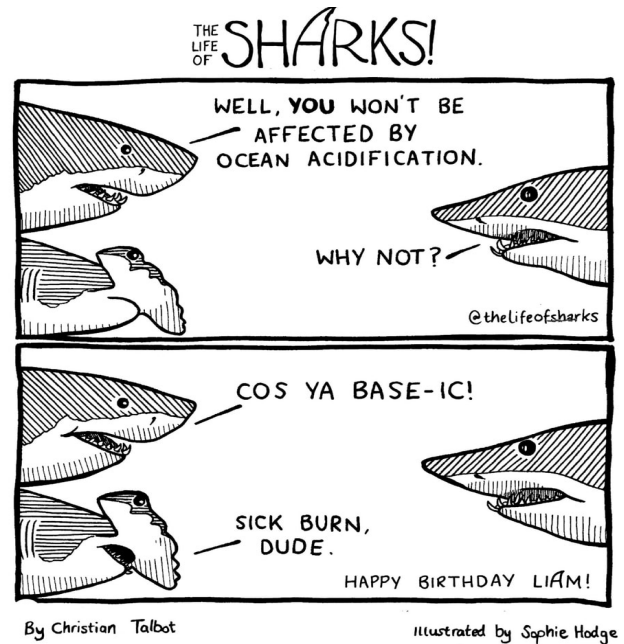

Hypotheses:

1.

2.

Materials:

- Oyster shell
- Cup of Vinegar
- Cup of Water
- Calipers
- Ruler
- Corals
- pH test strips
- pH meter
- Scale

Results:

1. CORAL DATA

Species	Treatment	Measurement #1 (mm)	Measurement #2 (mm)	Measurement #3 (mm)	Average Growth (mm)

2. OYSTER DATA

Vinegar pH =

Water pH =

Treatment	Length (mm)	Weight Day 1 (g)	Weight Day 2 (g)	Change in Weight (g)

Discussion:

How was *Montipora capitata* (MC) growth affected by the Control treatment? By the OA treatment?

How was *Pocillopora acuta* (PA) growth affected by the Control treatment? By the OA treatment?

Which coral species grew more under the Control treatment?

Which coral species grew more under the OA treatment?

What conclusions can you make about corals and ocean acidification?

How did the oyster shell weight change in the vinegar? What conclusions can you make about oysters and ocean acidification?
